

WF

The power supply can be 220Vac or 12Vdc from the Sun System.

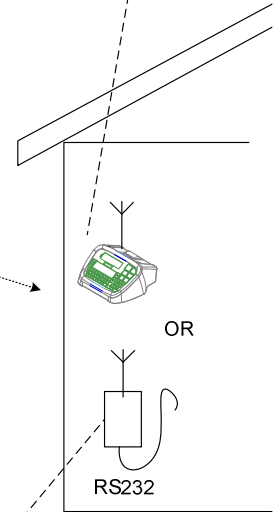

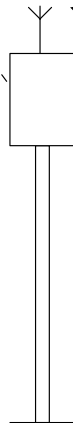

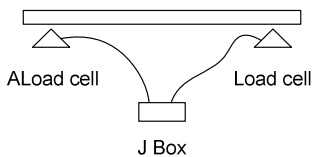

A CPU with on board an A/D converter and an alibi memory reads the load cells signal. It send by RS232 communication the data to the RXDL1 (RF module)

The calibration data are store in this CPU

RF 868 Mhz communication beetwen two RXDL1

The antennas can be two dipole (0dB) or two Yagi (12 db)

We can install the RXDL1 inside the indicato or outside (as for the PC)

The power supply (for the RXDL)1 can be 220Vac or 12Vdc from the Sun System.

WF wireless connection

- ★ **Wireless connection between scale and indicator**
- ★ **Legal for trade certified**
- ★ **Radio frequency connection up to 200 m**
- ★ **ASCII protocol communication**
- ★ **868Mhz**
- ★ **2 PSK modulation**
- ★ **Galvanic isolation between the scale and the elettronics equipment**

K4i - K9i

SunSystem

	min	MAX	Note
Panel Power	~40 Wp		~650x650 mm
Panel Current Intensity	0 A	~2.72 A	Depending on the light intensity
Battery Capacity (x2)	18 + 18 Ah		Pb L180mm h170mm P76mm
Battery Tension	12 Vdc		
Working Temperature	10 °C	+40 °C	(*)
Power Conductor Section	2.5 mm ²		

- ★ **SunSystem is able to power any weighting systems**
- ★ **It make indipendent them from the 220Vac mains**
- ★ **Photovoltaic pannel, two PB batteries, a voltage regulator board**
- ★ **Two PB batteries**
- ★ **Voltage regulator board**
